Hello, everybody! I am the moderator of this list. It seemed to grow quite quickly. We had 40 subscribers within the first 10 hours of it being formed. Now we have around fifty. I urge everyone to post something anytime they have something of interest for everyone else. I'll start:
I'm looking into getting an FT-847 for an upcoming EME dxpedition. Does anyone on the list have one that they could share the good and bad points of it with me? I would really appreciate it. Thanks very much! I want to know all of the operating impressions that it has created with whoever has one.
Charlie N2IM

http://www.ecis.com/~donlyles

I am looking for a power supply and Receiver for a Navy (Hamilton Radio) TCS-13. I have a transmitter in perfect condition (it is still in the box). Looking for something to make it work.

Hello to all & tnx to the host for opening this list.
My main interest is laser. I have lately developed an interest in 6 mtrs also.
I hope to have the 6-mtr station up & running before the 18th, so that I can try meteor scatter during the upcoming meteor shower.
Regards to all

From: Charles E Barkowski
Topic: 8 Message: 8

Hey, everyone! I need a little information from people that have one or more of the following radios: FT-847, FT-100, IC-706MKIIG. I am possibly going on an EME dxpedition in Feb. if I can get a good radio. I want to hear from everyone that has one of those radios if you all have the time to write. If you could write the pros and cons, I'd appreciate it. I am interested in using the radio for HF and VHF contesting, DXing, possible microwave operation, casual operating, local repeater work, satellite (I know the FT-847 takes the prize, but I would like to know about the other radios as well!), and good interference rejection. If you could help me out with this, I would appreciate it. The radio also needs to be able to perform on EME well. Also, if you have one for sale at a reasonable price, please let me know DIRECT! Thanks much!
73s,
Charlie Barkowski N2IM
P.S. If you want to let me know about the IC-746, I would appreciate that as well. tnx!

9. A question about antennas

Yahoo group: VHF_UHF_SHF
Date: 1999-11-27 00:56:43 UTC
From: amyhara@mb.sympatico.ca
Topic: 9 Message: 9

Hello,
I found this great file at http://www.rfm.com/corp/appdata/antenna.pdf
It describes the construction in detail of various antenna types (including slot, loops, folded dipoles, patches, et cetera in great detail) for use at mainly two frequencies, 433.9 MHz and 916.5 MHz. I'm new to RF, and although I have a fair knowledge of electronics and physics, I do have one dumb question about antennas: should the patch and slot antennas described in the file I referred to above have a ground plane on the other side of the board? I suspect not, but in the description of the slot antenna (the one that interests me the most) is a note that says if a different board thickness (in this case 1/16 inch FR-4) is used, then the length of the slot will have to be changed also. That confuses me.

Bye for now

Hello,
The document is in pdf format which you have to read with Adobe
Acrobat. It's an article about building antennas on printed circuit
boards.
Here's a response I got on another list:

I need to update my comptuer to Explorer 4.0 before I can use Acrobat. Had several problems today, including yours. Appears I need to go into the new millinium with 4.0 so will probably upgrade tomorrow. It is on my Son's Window 95 CD and I think I will bite the bullet and move.

I've been talking about it for months. Use 4.0 on my work computer and dislike it. More bells and whistles, harder to use. Don't like the left screen that keeps popping up.

I have a distant relative that has a microwave factory, where he builds one of a kind type microwave/computer readers. Been in his factory once. They read the amount of ____ (fill in the blank) water in hay, if a joint is firmly welded, etc. He uses the antenna you are asking about. Onboard the circuit board. He doesn't use a ground outside the computer.

Thank you for responding.
Acrobat is really useful if you need technical information about things like semiconductors. And I suppose most other industries are putting their documentation in the Acrobat pdf format, too. I think most information is still available in hard copy that companies will send out to you by mail, but its alot quicker to download it over the net, and it saves mailing costs and quite a few trees too!

I use Netscape 3.0, it's pretty stable and straightforward to use.

That's an interesting application. Many industries have to estimate the amount of water in a product (lumber, fruits, meats, et cetera) as it is being dried.

> if a joint is
> firmly welded, etc.
> He uses the antenna you are asking about. Onboard the

The ground I am wondering about is on the underneath side of the circuit board, under the antenna that is printed on the top side.

FYI, Dr. Don Lyles (AC6ZZ)

There are no special requirements for your browser except that you at
least have Acrobat Reader 3.x
You may have to set up your preferences for Acrobat Reader for such
documents. Acrobat reader works with any browser, any platform.
That's what makes AR so popular. The ".pdf" extension stands for
Portable Document File. It can be read on any platform, Mac, PC,
(Windows 95, 98, NT) Unix , etc. All you need is the related version
of Acrobat Reader for the platform you use.

Acrobat reader 4.0 is now available (has been for a while).
You can download it free at http://www.adobe.com/products/acrobat/readstep.html

73,
Jim, N9NGH

Dr. Don,

Do yourself a favor and go to the Microsoft site and download

IE 5.0 beta. This is a much improved browser.

My .02,

Bob

15. A question about the topic

Yahoo group: VHF_UHF_SHF
Date: 1999-11-29 07:25:54 UTC
From: Werner Posselt
Topic: 15 Message: 15

Hello !

It seems, software related questions produce more response on the reflector,
than V/U/SHF topics.

In my opinion this describes the general radio situation pretty well.

And now to something completely different ....

I would be interested in the beacon situation in other areas.
In Austria we have an ongoing project to install an efficient beacon system.
There are several beacons active on 10Ghz, and at least two 24Ghz beacons are
operational at this time.

One of the the highest beacons in central europe is installed in the alps
at 3100m ASL.
http://www.zamg.ac.at/sonnblick_frm.htm shows a nice picture of the QTH.
It has a 5.7 / 10 / 24 Ghz transmitter.

Would be glad if others could give a short description too.

Werner Posselt Meteor propagation --
OE2WPO the triumph of hope over experience.

Hi, all!
It certainly looks like we could you use a little more traffic on this list! For starters, it will be perfectly okay to send your VHF and above interests to the list so we can all see what each other's special area is as well as set up skeds amongst us. So, feel free to list your equipment, or equipment needs for your particular interests.
73s,
Charlie N2IM

OKAY, and thanks again for the reflector.
I do 6 mtrs and laser.
Would like to hear from others in Dallas-FW area doing laser also.

I'm trying to get some things going on the higher bands and am currently trying to design and build amps that would give me a couple watts out on 2304, 3456 and 5760 MHz. My transverters as they are only put out 20-40 mW.

Rogers Corp. has a neat little free program that calculates microstrip values - it has all the Rogers products preprogrammed in but you can change values to anything you want. If you input dielectric constant, dielectric thickness, impedance and frequency it will output the strip width and wavelength. Change the strip width and it will give you the new impedance, etc.

I also just ordered PUFF (a microwave design program - $10!) from Cal Tech. Has anyone here used it yet?

73, Zack W9SZ

Zack,

The amplifier issue could make an interesting article for Amateur Television Quarterly, if they would have enough bandwidth. If narrower bandwidth, i.e.: something to use for satellite communications, we could possibly publish in OSCAR Satellite Report.

Also, who is this Rogers Corp, and how do we find them? Sounds like an interesting program they have.

Thanks for the info. I'll have to look for that. I have a copy of AppCAD
from Hewlett-Packard. It does similar calculations and more. It's
another freebee. You can find it at:
http://www.semiconductor.agilent.com/rf/hprfhelp/design/appcad.htm

I have that, but I haven't used it yet. I'm not very knowledgeable about
RF stuff. I expect to be able to really appreciate Puff shortly though.

The questions about temperature constants and antenna gain should be within the scope of this reflector. don, AC6ZZ

Date: Tuesday, 21 December, 1999 10:45 AM
Subject: The moon

Tomorrow, the moon will be full and very bright. Where can I find out what the albedo is for the moon and its EM spectrum? What is the moon's EM spectrum as seen on the Earth? Does the Earth's upper atmosphere cause it to vary? Is the moon's albedo representative of Stephen-Boltzmann and Wien's laws? What is the temperature and constants and how is it determined? Are there articles on using this to measure radio antenna beam patterns and antenna gains? Where can I find the articles?

27. 222MHz CW transceiver

Yahoo group: VHF_UHF_SHF
Date: 2000-05-26 18:05:07 UTC
From: KD1NW
Topic: 27 Message: 27

Does anyone have plans for a simple VHF CW transceiver, preferably for 222.1 to 222.150 rock bound is OK. Its doesn't have to have high power or DSP etc, the simpler the better.

or

I have a 222 MHz FM radio that has CPU problems. I don't mind cutting up this radio if I can I use it in conjuction with an HF transceiver as a "transverter" set up.

Thanks for any help that you all can provide!

Topic: 28 Message: 28

Hello all,

I am working on a page on my web site that I am going to call 6 Meter Corner. Right now it is in the planning stages, I hope to have the first draft online in the next few weeks. What I am looking for is some input on what I should have on it, and actual information to put on it. I will tell you what I have got for Ideas first and then if you have an suggestions you can email me back about it.

- Interesting stories about first 6M contacts or just interesting contacts (definitely need people's short stories)

- A link to a good online call out page (Have any Idea's? I like DXSummit)

- Pictures of amateurs operating 6m at home, portable or mobile (Need pictures and information about the pics)

- A list of beacons, repeaters and nets on 6 (Need all that I can get)

- Links page for 6M pages (need all I can get)

- Band plans for 6M in different countries (need this info too)

See what I mean still in the planning stages? hi hi

If you have any Idea about sections I have not listed and / or have something to add to my ideas above (such as stories and pics and info)please email me directly (NOT THE E-Group as I don't want to upset people with my playing around hi hi) at ve1asj@...

Thank you,
Randy McLellan VE1ASJ / VE9ASJ

31. UHF Air-Mobile

Yahoo group: VHF_UHF_SHF
Date: 2000-11-01 01:11:21 UTC
From: David Herbert Hatch - N9ZRT
Topic: 31 Message: 31

Hi guys,

I am about to step into a new area of Amateur Radio that I have not yet experienced, and I am looking for some tips.

I am planning on going Air-Mobile Friday, Green Bay to Des Moines, back to Green Bay. We should be at about 7k feet.

Gear is Icom 706MIIG and a 440 beam. Will mount beam on camera tripod in rear seating area of the plane, pointing beam out window. Simple goal to to make as many FM and / SSB contacts as possible. Any tips? Any info appreciated!

Walking in new territory for me, and riding shotgun.

Many thanks, and listening.

Dave Hatch - N9ZRT

32. Air-Mobile 2wks ago, 146.520

Yahoo group: VHF_UHF_SHF
Date: 2000-11-01 02:02:48 UTC
From: David Herbert Hatch - N9ZRT
Topic: 32 Message: 32

Guys, this is old news, but thought you might enjoy it...

Date: Sat Oct 21, 2000 7:54am
Subject: Air-Mobile Report

Good morning!

Is it possible to have more fun than you can handle in a day?

I will never forget the time I went fishing off the coast of Maine. My cousin was the captain on this sea fishing trip. Three of us caught 90 Mackerel in 45 minutes. Each time we tossed out our bait, we had one on the line.

If you can ever get someone to take you, go!

That is what it was like working Air-Mobile yesterday. One contact after the other. Toss out the CQ, and bring back a contact. There were some quiet times, but for the most part it was one bite after another, and sometimes small pileups.

If you can ever get someone to take you, go!

YOU GOTTA LOVE THIS HOBBY

On the whole, the experience of working AM created an new awareness for me.
We have in our possession one of the finest hobbies in this old world. We have friendships in the waiting, technical skills in the learning, adventure at every corner, not to mention the fun of experimentation blended with lessons in geography!

NOT ONE FLIGHT, BUT TWO

What started out yesterday to be a plan of 4-5 hours in the air , in one trip, turned into 8 hours in the air in two trips. Each based in

Green Bay,
the first adventure took us to Des Moines, Iowa and back. The second to
Minneapolis, MN. and back.

TOTAL QSOs YESTERDAY

My personal goal was to get 60 contacts. From working AM 2 weeks ago, I
learned you could pull them in fairly fast. The goal was lofty, but I was
intent on at least trying. Let me give you the numbers first, then some of
the details.

Trip one: Green Bay, WI to Des Moines, Iowa, back to Green Bay, WI. Total
contacts: 68 QSOs
Trip two: Green Bay, WI to Minneapolis, MN, back to Green Bay, WI. Total
contacts: 37 QSOs
Total for the day: 105

Note: The first trip I was on the air 100% of the time. On the second trip I
was on the air about 75% of the time. Only about 4-5 contacts were repeats,
that is, 2nd or 3rd time-around contacts during the day.

THE RADIO AND GEAR

* Rig was a Kenwood HT, Model TH 225A.
* Ant was rubber duck next to window.
* Power supply was a jump-start battery with cig lighter adapters.
* GPS was a Garmin GPS III also powered by the jump-start battery.
* A pilot's "Knee board" [Small clipboard that straps to the leg] for logging.

SOME THINGS I LEARNED

* There are alot of hams named "Mike"
* There are a surprising amount of hams named, "Lloyd"
* I could hear ground stations sometimes better than they could hear me.
* You can actually get a pileup or two working AM!
* There are really alot of hams who monitor 146.520!
* An HT on the ground, in the clear, can send a signal a long way!

* If you do this, take a GPS with maps so you can give your QTH.
* It's a blast to go from "9-Land" to "0-Land" and hear the calls change over.
* Alot of contacts had 146.520 on the scanner and heard the CQ that way.

SOME OF THE HIGHLIGHTS OF THE DAY

* I cannot explain the excitement there was between operators to work an out-of-the-ordinary QSO. It is kind of like the term, "PortaVenture", a portable adventure. Several times I heard operators say, "This is my first AM contact!" Two fellows asked for a QSL card. They are at the printer.

* When we got to Des Moines, I was going to telephone my 82 year old dad, 30 miles away. It is his birthday tommorow. We had an agreed upon ron-day-voo location near Des Moines, but he was to wait until I had landed before he drove the distance. I did not know our exact arrival time in advance. When we were about 7 minutes from touchdown in Des Moines, I made a ham contact in my dad's town! Cool! That is also my hometown as well, Ames, Iowa. I asked the operator, KB0SVQ, if he would, "Please give my dad a telephone call and tell him you talked to me, and that he should now proceed to the ron-day-voo location." KB0SVQ happily agreed. I gave him the telephone number several times over the air. After another QSO, KB0SVQ came back and reported, "I talked to your dad and he is departing now." Boy was that slick. Dad was enroute before I was on the ground. I only had to wait about 10 minutes at the meeting location. This hobby is a fellowship of friends. When I asked KB0SVQ if he knew a childhood friend of mine there who is a ham, KI0Q, he said, "Sure do". It's a small ham world.

* Similarly, when we were landing in Minneapolis' "Flying Cloud Airport", a strong contact on the ground offered to telephone our future

passengers for
us, but I could not reach the telephone numbers before we touched down. This
is a fraternity of friends.

* I worked a handful of guys more than once on return legs of the trips. One
guy, W9UDX, I worked three times, each time on a different leg. He was also
my first contact of the day.

* I worked two fellows that I had worked 2 weeks ago when AM. That was cool.
At that time they were both out in their yards trying to spot us. Too far
away this time.

* A highlight was when I made my 73rd contact [because of our term, "73"].
That was with KB9UOF, mobile. We both got a kick out of that number significance.

* Perhaps the highlight was when I hit my goal of 60 contacts. That was with
KB9PVH, Steve in Lowell, Wisconsin. His signal was loud and clear, and while
it was not like being the millionth person to visit the Macys or anything,
it was a monument for me, and I think for Steve. If I remember right, he
said, "I cannot wait to tell the kids this one." Steve emailed me before I
even got home. Cool.

* Other emails were awaiting me when I arrived on the ground. I had this
email from W9QQQ: "For your info the rig I was using was an HTX 242 and
running 50W on a Ringo
Ranger. Would estimate that with you at Boscobel we were at 60 to 70 miles
here in Sparta [WI." We learn from this that AM makes a rubber duck really
fly.

* After giving my location as, "Crossing the Mississippi and now going over
Interstate...", one fellow ham fired off his call and said , "I can see
you!" With the GPS w/maps, I could give my exact location all the time. I
used small cities as ref points, often saying something like, "We are

about
3 miles SW of Jesup, Iowa". That is accurate enough for a spotter nearby
when looking up.

* I will kick myself when I think of others later.

THE PLANE

We were flying in a Piper Seneca II, a smaller twin, 6 passenger. Other than
colors, she was nearly identical to this bird...

http://www.montair.com/fleet/senecaii.htm

On the return from Des Moines, we cruised at 220 mph as we were
with-the-wind on that leg. Our altitude was most often 7000 ft +/-
1000.

THE REASON FOR THE TWO TRIPS

Trip 1.) Green Bay-Des Moines-Green Bay: My pilot friend, Kelly, works for a
construction company here in Green Bay. They are building a Menards [Home
supply store] near Des Moines and he had to fly down to check out the job. I
am from Ames, Iowa, 30 miles away, so he invited me to fly down with him. We
would have a 1.5-2 hr layover, enough time to take my dad out for coffee. We
also had to bring-home a job site superintendent.

Trip 2.) Green Bay-Minneapolis-Green Bay: Our church is interviewing a new
youth-family staff person.He lives in Minneapolis. Kelly offered to fly out
and get he and his wife/child. Kelly's co-pilot friend who was going to ride
along had another flight. The seat was open again, and so was the invite.
Being someone this new staffer might just work with [I am one of the
pastors], it was logical that I go along and welcome them.

IN SUMMARY

If you can ever get someone to take you, go!

33. Intro

Topic: 33 Message: 33

Hi guys,

As a new member, here is the scoop. I am N9ZRT, "Zesty Red Tomato". QTH is Green Bay, Wis. Been a ham for 5 yrs, a wannabee since age 8. Now 45 yrs old. Grew up in Ames, Iowa.

One wife, two boys, 19 [N9ZUR] and 17. Fav ham mode is portable from my old Willys. VHF and UHF are new to me, except for repeater work. I work an hour a week, Sunday mornings [so they think]. :) Rigs are Y FT 77 [in shack], Knwd 520s [in office]and I 706MKIIG for portable work. I run two egroup lists, one for SGC Smartuners and another for portable folks. I know how quiet we hams are on email, so I thought I'd hit the keyboard's PTT button and say, "Hi new friends"!

I may be short-time on this list, unless hooked on the mode. I am going airborne soon to experiment with UHF SSB.

Looking forward to listening.

Dave Hatch

34. Friday's details, Air-Mobile

Yahoo group: VHF_UHF_SHF

From: David Herbert Hatch - N9ZRT
Topic: 34 Message: 34

Hi folks,

I will be Air-Mobile, again this Friday. Unless something comes up.

Will depart Green Bay around 7am for flight to Des Moines. Arrival Des Moines [Ankeny airport] around 9-9:30am. Departure around 2:00pm, arrival to Green Bay by about 4pm.

1.) Will monitor 146.520, but will not do much CQing there, as will be trying another mode. Will do some CQing though.

2.) Will be working 440 USB, 432.100, using an Icom 706MKIIG and a beam. Will have beam pointed South on the way down, and North on the way back. Will be 20 watts or under. New mode for me. Beam will be on a camera tripod and will point out window from rear seating compartment.

If response on 432.100 brings in meager catch, will go to 146.520.

35. What should I expect?: 2m SSB

Yahoo group: VHF_UHF_SHF
Date: 2001-01-12 05:39:52 UTC
From: David Herbert Hatch - N9ZRT
Topic: 35 Message: 35

Hi guys,

I am new to 2m SSB. I am going mobile Friday on a road trip. May duck tape my new 2m dipole horizontal on an insulated roof gadget and fire off some CQs on the 2m SSB calling freq. This is new to me.

1.) What kind of range can I expect at 20 watts? 100 miles, more? Less?

2.) Once I make a contact, is it protocol to go off the calling freq, or is it OK to stay there for the QSO?

3.) As the range is limited, is it OK protocol to keep calling CQ for 15 minutes or so? I ask this, as with shorter range, it would seem all those able to be worked, would be worked it short order.

Any other tips? Again, I will be mobile, Green Bay to the South shore of Lake Superior, about a four hour drive.

Dave - N9ZRT [Thanks in advance!]

Hello Dave. I am from the UK, So these answers are with a UK View. (Only answered as no one else has up-todate) In a message dated 12/01/2001 06:31:37 GMT Standard Time, oslc@... writes: << I am new to 2m SSB. I am going mobile Friday on a road trip. May duck > tape my new 2m dipole horizontal on an insulated roof gadget and fire > off some CQs on the 2m SSB calling freq. This is new to me. Not sure of the Set-up, But are you Driving or a Passenger. If driving, get a Hands Free Mic. (For safety). Also be careful when conducting frequency changes etc. But I have done this and it is great fun. Whilst actually mobile, We left the TX/RX monitoring a weakish Beacon. Once climbing hilltop and Beacon Got quite Strong, We stopped then called CQ. > 1.) What kind of range can I expect at 20 watts? 100 miles, more? Less? This can depend on your Location really. If on a Hilltop, 400miles maybe. But again this depends on conditions etc. If actually mobile. Then Not to Far due to Terrain, Takeoff etc. But best to stop as said before on a Hilltop. (With Good Takeoff) > 2.) Once I make a contact, is it protocol to go off the calling freq, or is it OK to >stay there for the QSO? Not sure what happens in the UK. But move off Calling Frequency once QSO Established. Also, whilst on hilltop, check to see if a Frequency you are intending to QSY to is free. Nothing worse that having a qso only to be lost due to another QSO on the same frequency which you didnt know was there as you were amongst the hills and trees. Also Why not try and find a clear Frequency and Call CQ On that frequency. You dont have to Call cq on the Calling Frequency. Here in the UK many amateurs look up and down the band for Stations either already in QSO (and then call them when they sign their current QSO) or calling CQ. > 3.) As the range is limited, is it OK protocol to keep calling CQ for 15 minutes or >so? I ask this, as with shorter range, it would seem all those able to be worked, >would be worked it short order. My previous Answer refers. But bear in mind. In UK, Many Amateurs do get a little cheesed off by not only a mobile, but Amateurs going onto the Calling Frequency and calling constantly for say 10-20 minutes, with the occasional 'Bloomin Hell, is there no one out there' Remark. Just give a couple of CQ Calls every now and then and keep them short. Lots and Lots of stations will hear you. Now if they answer is another question. It is not everyone's cup of tea chatting to a Mobile Station. They usualy have their RX On in case of DX. Only to find that there is DX Out there, but they cant hear it, cos a Mobile station has been calling CQ Constantly for 10 minutes. Try this method. Give a CQ Call (Approx 30 seconds is fine), if no answer try again but leave a gap of at least 1 Minute for other stations to call CQ. (You can answer them then). After your second CQ Call and still no reply. Go and have a listen to the Beacons, and note their strengths and your location (Take a Beacon List with you). the reason for this is that you will know where the Beacons were heard strongest and go to that Portable place in the future and Sit there and Work DX in good conditions. If youve done that or dont want to do that. Try looking up and down the band. About 100 either side of Calling Frequency and look for stations already in QSO. But it is best optimum if you are able to turn your small Yagi to beam at them. > Any other tips? Again, I will be mobile, Green Bay to the South shore > of Lake Superior, about a four hour drive. Keep your Callsign in other Stations good books by taking this Advice above. I am a DXer and when we are out Portable as a large group, You should see the groans when some stations come on and call cq - We have all heard them previously and know they call CQ For hours and hours. Dont call into any Station that is having DX Contacts. There is nothing worse than knowing that DX is trying to call only to find a Mobile station down the road wants a chat. Hi. Keep your overs short, Dont rabbit on

and on and on, The other station you are in qso will soon get bored and leave whilst you are in midst of telling him about your bad back and how it hurts. Hi. And most importantly of all, dont get tooo down if no-one replies at all. Bear in mind that there might be something good on Telly. Or more obviously they have all gone and connected to the Internet (Known as the smuttynet). Hope this is of some use to You Dave, and please all, bear in mind this a UK 2m Stations views. > Dave - N9ZRT [Thanks in advance!] News Related To 144MHz In Europe (http://members.aol.com/g0nfa/144news.html) All The Best & GL Derek - 144MHz@... g0nfa@... http://www.g0nfa.co.uk - For 144MHz Links Pages http://members.aol.com/g0nfa/144news.html - For 144MHz News Bulletin

39. Pin The Tail On The Map...

Yahoo group: VHF_UHF_SHF
Date: 2001-01-25 12:58:30 UTC
From: David Herbert Hatch - N9ZRT
Topic: 39 Message: 39

Hi UHF/VHF/SHF friends,

I want to welcome you to work our fun event tonight, PIN THE TAIL ON THE MAP.

Over 20 "never seen ham radio before" participants will gather around three stations tonight as we attempt to fill the maps with contact-pins.

This is a personal welcome for you to check-in and make their night! Here is the scoop...

Times: January 26th, 0000-0230Z
aka
January 25th, 6pm-8:30pm CST

W9HAM, Randy: 28.425 Mh / 21.310
Rig will be Y FT-100
Resonante whip from vehicle, coax into bldg.

K9BOB, Bob [Frequencies to be announced]
CW [Fairly high speed]
Rig unknown
Ant will be Alph Delta DXCC, fixed, North-South

N9ZRT, Dave:

18.155 - 0000-0100Z
7245 - 0100-0130Z [Depending on band conditions]
14.285 - 0130-0230Z

Rig will be Icom 706MKIIG / SGC-231 Ant Coupler
8 foot x 2 inch Pyrex Ionic Fluid Ant
10 foot x 2 inch PVC Ionic Fluid Ant
23 foot Long Wire
From the back of an old Willys

QTH will be Green Bay, Wisconsin.

+ Check this site for major updates to the schedule and K9BOB's frequency:

http://www.qrz.com/database?callsign=n9zrt

+ If you call in, please specify if you are on one of the following lists...
- Live-Wire
- HF Pack

- Smartuners
- Icom 706
- UHF/VHF
- Other

Hope to work you!

Dave - N9ZRT

40. Liquid Ant QSO - Press Release

Yahoo group: VHF_UHF_SHF
Date: 2001-03-18 06:13:43 UTC
From: Dave
Topic: 40 Message: 40

FOR IMMEDIATE RELEASE

CONTACT:
David Herbert Hatch - N9ZRT
The Live-Wire Group
oslc@...
http://www.wireservices.com/livewire.html

First QSO Between Two "Ionic Fluid Antennas" [Liquid Antennas]

GREEN BAY, WISCONSIN - March 17, 2001. The Live-Wire Group, an Amateur Radio organization in the USA, recorded the first "Liquid Antenna" to "Liquid Antenna" QSO today. Liquid antennas are a new concept developed on The Live-Wire Group and are currently being experimented with by the group's members.

The QSO took place on St. Patrick's Day, Saturday - March 17, 2001, 1719 Zulu on SSB at 18.157.50 MHz. The participating stations were WH2AAT in Orange Park, Florida and N9ZRT in Green Bay, Wisconsin. Both stations were operating on 10 foot tall x 2 inch wide "columns of ionic fluid" [In this case, concentrated saltwater]. Also participating in the QSO was W8ZU in Glen Rock, Pennsylvania who was using a conventional antenna. Two Live-Wire Group members, N7PPF and KJ6AP, witnessed the QSO from their stations in Riverside, California and Vancouver, Washington, respectively.

Members of the Live-Wire Group have been experimenting with the Ionic Fluid Antennas [IFAs] for over six months and they have been receiving excellent reports on the antenna's performance. In most cases the liquid antennas are operated in the vertical position. The RF is fed into the base of the antenna through several three-inch long copper probes that are exposed to the conductive liquid.

Live-Wire members continue to experiment with this new antenna concept in various forms including liquid dipoles and "pump-able to resonant length" verticals.

The Live-Wire Group exists those Amateur Radio operators who enjoy experimenting with creative and simple antennas using "Yankee Ingenuity" often in portable-outdoor settings. There is no membership fee. The Live-Wire Group can be accessed via the Internet at http://www.wireservices.com/livewire.html.

41. Air-Mobile Today - Iowa/Wisconsin

Yahoo group: VHF_UHF_SHF
Date: 2001-04-03 11:13:54 UTC
From: Dave
Topic: 41 Message: 41

Good morning,

We will be Air-Mobile today. Will be working 146.520
Simplex and 144.200 SSB, alternately about every 15 minutes or so.
Flight path will be straight lines from these points...

Morning legs, departing at 7:45am CST, approx:

Leg 1:) Green Bay to La Crosse, Wisconsin [167 statute miles, about 1
hour]. Coloma, Wisconsin lies half way on that path.

Passenger drop.

Leg 2:) La Crosse, Wisconsin to Des Moines, Iowa [200 stature miles,
about 1 hour +] Waterloo / Cedar Falls, Iowa lie half way on that
path.

Afternoon legs, departing at 4:00pm CST, approx:

Leg 3.) Des Moines, Iowa to La Crosse, Wisconsin [200 stature miles,
about 1 hour +] Waterloo / Cedar Falls, Iowa lie half way on that
path.

Passenger pickup.

Leg 4.) La Crosse, Wisconsin to Green Bay [167 statute miles, about
1 hour] Coloma, Wisconsin lies half way on that path.

Hope to work you.

Dave

44. 6m FM SSTV/simplex repeater on HABITAT SkyLab balloon

Yahoo group: VHF_UHF_SHF
Date: 2001-06-25 04:12:13 UTC
From: ka0jlf@earthlink.net
Topic: 44 Message: 44

I have the 6m FM SSTV and simplex repeater working. I plan to fly it on the HABITAT SkyLab balloon this coming weekend. I plan to use 52.540 MHz, {my brother only has two crystals}. The SSTV will send a live onboard picture about every 3 minutes. I plan to have the simplex repeater use the time between SSTV pictures. Robot 36 will be used on the Kenwood VC-H1 to send the pictures.

The simplex repeater records (digitally) what it hears on freq. for upto about 30 seconds. Then it retransmits what it heard on the same frequency with a little curtousy tone. I intend 10 minute IDs and occational voice temperature announcements. These will probably cover simplex QSOs. Please QSL to me. Would someone volunteer to log calls for me through the simplex repeater, I would appreciate it. I plan to send a certificate for all stations, wishing one, that worked through the Simplex Repeater and/or SSTV pictures received. Other assistance could be helpful.

More info on the "Great Plains Super Launch 2001" at http://users.crosspaths.net/~wallio/gpsl2001.html this was in a recent ARRL news letter.

73 de Don KA0JLF

45. Virus got through

Yahoo group: VHF_UHF_SHF
Date: 2001-06-26 13:46:13 UTC
From: Dave
Topic: 45 Message: 45

Hi,

I am Dave Hatch and am a Moderator/owner of several Yahoo lists.

Our Live-Wire Group list had a Yahoo experience that I thought should be shared with other lists.

Even though we have our list settings set as, "Email attachments are not permitted", last night attached files did come through on several posts, and these attached files contained an email worm virus. The file appears as an attachment on some email software, and perhaps not on others.

Note that the virus posts the following note in the body of the email...

"Take a look to the attachment"

Read about the virus here...

http://www.mcafee.com/anti-virus/viruses/badtrans/

Moderators, interestingly, the posts containing the virus do not appear at the Yahoo Live-Wire archive page, yet they came through email.

So, they have a glitch in their system it would seem. I contacted Yahoo. Waiting.

Dave

46. 6m FM on Saturday's balloon

Yahoo group: VHF_UHF_SHF
Date: 2001-06-28 03:09:00 UTC
From: Don Pfister
Topic: 46 Message: 46

First let me say a deserved THANK YOU to all that helped me with the pinouts for my 6m HT!!! Now what am I going to do with it? Please read:

I am facing the horizontal vs. verticle antenna question for Saturday's balloon flight. I think the 6m verticle stations would be hurt the most if I went with a horizontal antenna. I will probably fly a J-Pole on the 6m 1W FM SSTV and simplex repeater. Monitoring (scanner or whatever) stations can receive the SSTV with their computer and a microphone, as well as monitor the simplex repeater, IDer and voice themometer announcements. I sure hope some of you will be able to try the 6m as well as the 2m and/or 440.

More info at http://users.crosspaths.net/~wallio/gpsl2001.html possible range map at this site. At 90,000 ft there should be at least 600 km range each way, so a possible 1200 km contact? IF I make the planned 100,000 feet plus even farther possible. Any skip or hop would only add to it.

I plan to make 100,000 feet with the balloon, so we should get some nice ground wave distance. Any hope of an opening or single hop? Oh well, let's give it a try. I really would like to get the distance between stations record! Give it some thought and plan some quick QSOs through the simplex repeater. YOUR help is needed to make it happen.

Here is the planned operation; the VC-H1 will send SSTV photos from the balloon 3 minutes apart (a picture takes about 72 seconds to transmit - Robot 36), then I plan to ID < 20 seconds, voice inside/outside temperature announcement and then back to the simplex repeater for about 2 or 3 minutes. The simplex repeater listens for up to about 30 seconds then re-transmits what it hears. This cycle(s) will repeat. The SSTV pictures should be the same ones captured on the camcorder onboard. APRS flight data will be available on the air or on the web real time. One of the other groups will have SSTV on their payload too but 2m I think. See web site above for all frequencies planned.

I plan to QSL any that QSL me. I will send a "Great Plains Super Launch 2001" certificate from HABITAT SkyLab for any that QSL me via snail or email. Please send reports, recordings, or contacts to me at ka0jlf@.... If there are any volunteers out there, I could use ground stations recording callsigns and grids for me. It is real tuff doing all that when chasing a balloon. ;-)

Of course the VX-1R is going to do tracking duty onboard. It will be one of the main tracking data transmitters.

73 everyone let's set a record!!! Please read the web site above for what documentation (proof) we need. ;-)

47. spkr/mic for HTX-400

Yahoo group: VHF_UHF_SHF
Date: 2001-06-29 12:53:03 UTC
From: kb4cwr@hotmail.com
Topic: 47 Message: 47

Hi All!

Does anyone make a spkr/mic in which the speaker and microphone DO NOT share a common ground? The HTX-400 requires that the speaker output be isolated from ground and as of yet, I have not found a spkr mic that meets this requirement. (I've already fried ONE HTX-40O by trying to use the spkr/mic for my HTX-202. Thank God the little radio was still under warrenty!)

TNX ES 73 DE NATHAN KB4CWR

48. Off to NYC - Need dual-bander

Yahoo group: VHF_UHF_SHF
Date: 2001-09-22 23:48:52 UTC
From: Dave Hatch - N9ZRT
Topic: 48 Message: 48

Hi UHF - VHF friends,

One of our Live-Wire members [Yahoo Groups] has been called up to serve with the
Red Cross in NYC. Time for his departure is short. Your help is needed. Our man is, Fred K2FRD. He writes, moments ago...

"I'm in the process of being activated for NYC - to Brooklyn Amateur Radio Club Comm Center, apparently co-located with the other ARC - Am REd Cross - at the foot of the Brooklyn Bridge. I think I've got a place to stay (waiting on a phone call from my niece in Brooklyn near Prospect Park, but it's a shoe-in; still, I need to confirm), but will need a 2-band mobile rig. I'm checking around locally - does the collective group have one already lined up to be picked up in NJ or whatever the arrangements you made? Time is critical... so I need to locate one as quickly as possible or miss my chance. I've also got phone calls in to a number of local hams looking for a 2-band rig."

[Dave adds] Guys, I used to live across the Hudson in NJ, and my friends there are willing to rx, by shipment, a 2-band mobile for Fred,
and then we can get someone to drive it into the city to him.

Anyone want to assist Fred with the loaning of a 2-band mobile? If so, write back to me, Dave, ASAP, oslc@...

In case you want to contact our friend who is off to NYC, K2FRD directly, he is at...

Fred Stevens K2FRD <thefred@...>

He may be leaving for NYC as early as this evening. He is awaiting further instructions. Fred is a retired Signal Corpman living in Upstate NY. He has been on the waiting list for NYC call-up for several days.

Thanks!

Dave

49. NYC - Got rig!

Yahoo group: VHF_UHF_SHF
Date: 2001-09-23 01:39:36 UTC
From: Dave Hatch - N9ZRT
Topic: 49 Message: 49

Hi all,

Fred, our NYC bound friend, K2FRD, just reported he got a dual bander rig from a local ham. Fred writes...

"Just got back from picking up a 2m/440 mobile rig from Ray K2DAR, good friend and former local club President and club founder. I found out in short order than nobody around here uses 440 except for Ray who uses it to control our local repeater."

Thanks to everyone. Fred will give reports back, via the Live-Wire list, or other lists he may be on. Thanks one and all. God bless Fred.

Dave

DO NOT DELETE IF YOU HAVEN'T READ THIS. THIS IS A ONE TIME MAILING.
This program is for real. And it works no matter which country you live in (read the testimonials at the end of this message). Read on and you will be convinced. It would only take 2 minutes.

Dear Friends & Future Millionaire:

AS SEEN ON NATIONAL TV:
Making over half million dollars every 4 to 5 months from your home for an investment of only $25 U.S. Dollars expense one time

Step by Step Instructions are enclosed to insure your success with this program. Please take the 2 minutes it takes to read this letter.

THANK'S TO THE COMPUTER AGE AND THE INTERNET !
==========

BE A MILLIONAIRE LIKE OTHERS WITHIN A YEAR!!!

Before you say ''Bull'', please read the following. This is the letter you have been hearing about on the news lately. Due to the popularity of this letter on the Internet, a national weekly news program recently devoted an entire show to the investigation of this program described below, to see if it really can make people money. The show also investigated whether or not the program was legal.

Their findings proved once and for all that there are ''absolutely NO Laws prohibiting the participation in the program and if people can -follow the simple instructions, they are bound to make some mega bucks with only $25 out of pocket cost''. DUE TO THE RECENT INCREASE OF POPULARITY & RESPECT THIS PROGRAM HAS ATTAINED, IT IS CURRENTLY WORKING BETTER THAN EVER.

You are supplying information for a small fee- People will request from you copies of all reports many times over. This is a cash business better than a Mc ee D.!!!!!
Each report will give you the information you will need to succeed.

This is what one had to say: '' Thanks to this profitable opportunity. I was approached many times before but each time I passed on it. I am so glad I finally joined just to see what one could expect in return for the minimal effort and money required. To my astonishment, I received total $610,470.00 in 21 weeks, with money still coming in''. Pam Hedland, Fort Lee, New Jersey.

==========
Here is another testimonial: ''' this program has been around for a long time but I never believed in it. But one day when I received this again in the mail I decided to gamble my $25 on it. I followed the simple instructions and walaa ..... 3 weeks later the money started to come in. First month I only made $240.00 but the next 2 months after that I made a total of $290,000.00. So far, in the past 8 months by re-entering the program, I have made over $710,000.00 and I am playing it again. The key to success in this program is to follow the simple steps and NOT change anything.'' More testimonials later but first,

========== PRINT THIS NOW FOR YOUR FUTURE REFERENCE ==========

$$$

===
Within a few days you will receive, vie e-mail, each of the 5 reports from these 5 different individuals. Save them on your computer so they will be accessible for you to send to the 1,000's of people who will order them from you. Also make a floppy of these reports and keep it on your desk in case something happen to your computer.

===
IMPORTANT __ DO NOT alter the names of the people who are listed next to each report, or their sequence on the list, in any way other than what is instructed below in step '' 1 through 6 '' or you will lose out on majority of your profits. Once you understand the way this works, you will also see how it does not work if you change it. Remember, this method has been tested, and if you alter, it will NOT work !!! People have tried to put their friends/relatives names on all five thinking they could get all the money. But it does not work this way. Believe us, we all have tried to be greedy and then nothing happened. So Do Not try to change anything other than what is instructed. Because if you do, it will not work for you. Remember, honesty reaps the reward!!!

1.... After you have ordered all 5 reports, take this advertisement and REMOVE the name & address of the person in REPORT # 5. This person has made it through the cycle and is no doubt counting their fortune.

2.... Move the name & address in REPORT # 4 down TO REPORT # 5.

3.... Move the name & address in REPORT # 3 down TO REPORT # 4.

4.... Move the name & address in REPORT # 2 down TO REPORT # 3.

5.... Move the name & address in REPORT # 1 down TO REPORT # 2

6.... Insert YOUR name & address in the REPORT # 1 Position.

PLEASE MAKE SURE you copy every name & address ACCURATELY!
==========

**** Take this entire letter, with the modified list of names, and save it on your computer. DO NOT MAKE ANY OTHER CHANGES.

Save this on a disk as well just in case if you lose any data. To assist you with marketing your business on the internet, the 5 reports you purchase will provide you with invaluable marketing information which includes how to send bulk e-mails legally, where to find thousands of free classified ads and much more. There are 2 Primary methods to get this venture going:

METHOD # 1: BY SENDING BULK E-MAIL LEGALLY
==========

Let's say that you decide to start small, just to see how it goes, and we will assume You and those involved send out only 5,000 e-mails each. Let's also assume that the mailing receive only a 0.2% response (the response could be much better but lets just say it is only 0.2%. Also many people will send out hundreds of thousands e-mails instead of only 5,000 each). Continuing with this example, you send out only 5,000 e-mails.

With a 0.2% response, that is only 10 orders for report # 1. Those 10 people responded by sending out 5,000 e-mail each for a total of 50,000. Out of those 50,000 e-mails only 0.2% responded with orders.

That's=100 people responded and ordered Report # 2.

Those 100 people mail out 5,000 e-mails each for a total of 500,000 e-mails.
The 0.2% response to that is 1000 orders for Report # 3.

Those 1000 people send out 5,000 e-mails each for a total of 5 million e-mails sent out.
The 0.2% response to that is 10,000 orders for Report #4.

Those 10,000 people send out 5,000 e-mails each for a total of 50,000,000 (50 million) e-mails.
The 0.2% response to that is 100,000 orders for Report # 5
THAT'S 100,000 ORDERS TIMES $5 EACH=$500,000.00 (half million).

Your total income in this example is: 1..... $50 + 2..... $500 + 3.....$5,000 + 4..... $50,000 + 5..... $500,000 ..... Grand Total=$555,550.00

NUMBERS DO NOT LIE. GET A PENCIL & PAPER AND FIGURE OUT THE WORST POSSIBLE RESPONSES AND NO MATTER HOW YOU CALCULATE IT, YOU WILL STILL MAKE A LOT OF MONEY !

==========
REMEMBER FRIEND, THIS IS ASSUMING ONLY 10 PEOPLE
ORDERING OUT OF 5,000 YOU MAILED TO. Dare to think for
a moment what would happen if everyone or half or even
one 4th of those people mailed 100,000 e-mails each or
more? There are over 150 million people on the
Internet worldwide and counting. Believe me, many
people will do just that, and more!

METHOD # 2 : BY PLACING FREE ADS ON THE INTERNET
==========
Advertising on the net is very very inexpensive and
there are hundreds of FREE places to advertise.
Placing a lot of free ads on the Internet will easily
get a larger response. We strongly suggest you start
with Method # 1 and add METHOD # 2 as you go along.
For every $5 you receive, all you must
do is e-mail them the Report they ordered. That's it.
Always provide same day service on all orders.

This will guarantee that the e-mail they send out,
with your name and address on it, will be prompt
because they can not advertise until they receive the
report.

========== AVAILABLE
REPORTS==========

ORDER EACH REPORT BY ITS NUMBER & NAME ONLY. Notes:
Always send $5 cash (U.S. CURRENCY) for each Report.
Checks NOT accepted. Make sure the cash is concealed
by wrapping it in at least 2 sheets of paper. On one
of those sheets of paper, Write the NUMBER & the NAME
of the Report you are ordering, YOUR E-MAIL ADDRESS
and your name and postal address.

PLACE YOUR ORDER FOR THESE REPORTS NOW :
==========
REPORT # 1 : ''The Insider's Guide to Advertising for
Free on the Net''
Order Report # 1 from:

Teresita Santos
1-7 Row House Rawis
Don Bosco, Tondo Manila
Philippines 1012

REPORT # 2 : ''The Insider's Guide to Sending Bulk
e-mail on the Net''
Order Report # 2 from :

Bianca Elaine
c/o Joy Casanova
35 India St., Better Living Subd.
Paranaque City
Philippines 1711

REPORT # 3 : ''The Secret to Multilevel marketing on
the net''
Order Report # 3 from:

Kris H. Webber
Sankt Hansgade 24,3th.
Copenhagen 2200
Denmark

REPORT # 4 : ''How to become a millionaire utilizing
MLM & the Net''
Order Report # 4 from:

J Profit
P.O.Box 38333
Greensboro,NC 27438-8333
USA

REPORT # 5 : ''HOW TO SEND 1 MILLION E-MAILS FOR
FREE''
Order Report # 5 from:

Auralyn Joy
c/o Maximo L. Quijano
2262 Road 3
San Andres Bukid
Manila City
Philippines 1017

$$$$$$$$$ YOUR SUCCESS GUIDELINES $$$$$$$$$$$

Follow these guidelines to guarantee your success:

=== If you do not receive at least 10 orders for
Report #1 within 2 weeks, continue sending e-mails
until you do.

=== After you have received 10 orders, 2 to 3 weeks
after that you should receive 100 orders or more for
REPORT # 2. If you did not, continue advertising or
sending e-mails until you do.

=== Once you have received 100 or more orders for Report # 2, YOU CAN RELAX, because the system is already working for you, and the cash will continue to roll in ! THIS IS IMPORTANT TO REMEMBER: Every time your name is moved down on the list, you are placed in front of a different report.

You can KEEP TRACK of your PROGRESS by watching which report people are ordering from you. IF YOU WANT TO GENERATE MORE INCOME SEND ANOTHER BATCH OF E-MAILS AND START THE WHOLE PROCESS AGAIN. There is NO LIMIT to the income you can generate from this business !!!

==========

FOLLOWING IS A NOTE FROM THE ORIGINATOR OF THIS PROGRAM:
You have just received information that can give you financial freedom for the rest of your life, with NO RISK and JUST A LITTLE BIT OF EFFORT. You can make more money in the next few weeks and months than you have ever imagined.

Follow the program EXACTLY AS INSTRUCTED.
Do Not change it in anyway. It works exceedingly well as it is now. Remember to e-mail a copy of this exciting report after you have put your name and address in Report #1 and moved others to #2 .....# 5 as instructed above. One of the people you send this to may send out 100,000 or more e-mails and your name will be on every one of them. Remember though, the more you send out the more potential customers you will reach. So my friend, I have given you the ideas, information, materials and opportunity to become financially independent. IT IS UP TO YOU NOW!

========== MORE TESTIMONIALS==========

'' My name is Mitchell. My wife, Jody and I live in Chicago. I am an accountant with a major U.S. Corporation and I make pretty good money. When I received this program I grumbled to Jody about receiving ''junk mail''. I made fun of the whole thing, spouting my knowledge of the population and percentages involved. I ''knew'' it wouldn't work. Jody totally ignored my supposed intelligence and few days later she jumped in with both feet. I made merciless fun of her, and was ready to lay the old ''I told you so'' on her when the thing didn't work. Well, the laugh was on me! Within 3 weeks she had received 50 responses. Within the next 45 days she had received

total $ 147,200.00 ..... all cash! I was
shocked. I have joined Jody in her ''hobby''. Mitchell
Wolf M.D., Chicago, Illinois
==========
'' Not being the gambling type, it took me several
weeks to make up my mind to participate in this plan.
But conservative that I am, I decided that the initial
investment was so little that there was just no way
that I wouldn't get enough orders to at least get my
money back''. '' I was surprised when I found my
medium size post office box crammed with orders. I
made $319,210.00 in the first 12 weeks. The nice thing
about this deal is that it does not matter where
people live. There simply isn't a better investment
with a faster return and so big''. Dan Sondstrom,
Alberta, Canada
==========
'' I had received this program before. I deleted it,
but later I wondered if I should have given it a try.
Of course, I had no idea who to contact to get another
copy, so I had to wait until I was e-mailed again by
someone else.....11 months passed then it luckily
came again..... I did not delete this one! I made
more than $490,000 on my first try and all the money
came within 22 weeks''. Susan De Suza, New York, N.Y.
==========
'' It really is a great opportunity to make relatively
easy money with little cost to you. I followed the
simple instructions carefully and within 10 days the
money started to come in. My first month I made $
20,560.00 and by the end of third month my total cash
count was $ 362,840.00. Life is beautiful, Thanx to
internet''. Fred Dellaca, Westport, New Zealand
==========

ORDER YOUR REPORTS TODAY AND GET STARTED ON YOUR ROAD
TO FINANCIAL FREEDOM!

From: vhfradiobuff
Topic: 52 Message: 52

I'm posting here because I just checked and it seems there are a number of VHF+ related groups, but none seem too sucessful with very list posting. I have created a new group, titled VHF All Mode Plus, dedicated to the discussion of frequencies in the amateur band from 50 mhz on up, all modes. If you are interested, please visit http://groups.yahoo.com/group/vhfallmode to sign up. If the maximum number of people join from this group and others, I think we can have a good discussion group! Hope to see you there!

Topic: 53 Message: 53

New Yahoo Group/Mailing List for help Hams make 6 meter contacts. The group is called 6 Meter Sked and can be found at http://groups.yahoo.com/group/6meter/ The purpose of the group is to give hams a place to let other hams know what freq, what mode and when on the 6 meter band they and monitoring. Also to post information about band openings and 6 meter nets. If you only have e-mail access you can join by sending a blank e-mail to 6meter-subscribe@yahoogroups.com

Hope to catch you on 6!

54. IC-V68

Yahoo group: VHF_UHF_SHF
Date: 2001-12-20 02:13:31 UTC
From: njapolinario
Topic: 54 Message: 54

Hello everyone!

I am a new member here and I am hoping that I would learn much regarding VHFs and UHFs from this group.

You see, I just bought a second hand Icom IC-V68 portable two days ago. This is my first radio ever, and I am just a newbie to two-way radios. And gee, I am quite excited about the possibilities I can do with VHF.

Now, on to my question. Does anyone here know where I can download instruction manuals for Icoms? Since my portable is used, it didn't come with a manual. From what I understand, the IC-V68 is an Asian-only version. Correct me if I'm wrong.

Thank you very much everyone!

I am presently refurbishing a MMT 432-28S transverter (without original info) I have downloaded some info of the web but it is different for this version. This version has 2 presets on the main pcb. One for IF attenuation and the other for attenuation at 432 MHz. Does anyone have info for this version or has any experience in these units.

Hello:

Most of my radio contacts and time are spent on the digital modes and I really think they are the way to go (for me anyway). I also think that the VHF/UHF bands are not used to the fullest and maybe lower power and smaller yagis using digital could make a difference even on VHF/UHF...so trying to dedicate some folks just for that...interested in try some digital on VHF/UHF?? Give this group a look at (180 members in 2 months):

I would like to buy the Icom IC-T81A but I am unable to find any one in
Bergen county, NJ who's on 1.2 GHz. If I knew there was someone to talk to,
I would buy the radio in a heartbeat!

From: Don Pfister
Topic: 67 Message: 67

While this isn't PSK or SSB, it is VHF/UHF and may well be weak signal (it will be QRP) for you guys at a distance.

Project Traveler and HABITAT SkyLab groups will be launching balloons from the Herington KS Airport tomorrow morning 9/7/02 at 10 a.m. CDT. Both balloons will have APRS on 144.39.

APRS callsign for HABITAT SkyLab will be KA0JLF-11. Both should show up (Lat/Long and altitude) on the
web at findu.com (see below).

HABITAT SkyLab will have ATV on 439.25 MHz (QRP) and a simplex repeater on 147.585 in addition to the APRS.

LOS for the balloon at altitude can be 500 miles or more, so give a listen. See if you can hit the simplex repeater. It records what it hears for about 30 seconds, then plays back what it recorded and ends with a tone.
Unlike a real repeater you won't be able to hear someone else talking (on the record side) so it may take a couple of tries.

HF will be on 7.2535 MHz.

All antennas will be vertical. QSLs will get a certificate by return mail or email, send QSO info. We would like to break the QSO distance record, your help would be appreciated.

Thanks for letting spread the word to the groups.

68. 2m antennas

Yahoo group: VHF_UHF_SHF
Date: 2002-09-09 13:16:58 UTC
From: theperryds@aol.com
Topic: 68 Message: 68

Hello group. New member here!

After about 25 years of operating I am trying to get a decent 2m station together. I currently use a 10m Altron tower with a 10ele XY atop in IO91CC square.

Thanks to the recent contest I managed two new countries, 3 if you include wales!

Question...is my 10 ele XY woth keeping for SSb or would I be better off removing the vertical elements and making two 10 eles in bayed formation? Presumably this adds another 3db of gain?

The XY is driven by a folded dipole, so all the elements are that short. I have another Yagi, a 14 ele one which is much longer (i.e. longer than just another 4 eles) and made with true dipoles. Is this likely to be significantly better?

Or should I go out and buy (two) different antennas?

I do not have a masthead preamp.

I run an IC746.

Sorry if these questions are duffer type, but just trying to improve what I have. Alternative;ly, ifanyone has an old copy of the VHF UHF Dxing handbook for sale...let me know, I am sure the answers are all held therein!

May apologies for the shotgun approach to sending this. I'm trying to hit as many of those birds with this rock as I can. ;-) I didn't do a very good job of notifying everyone, missed some lists etc.

I did my typical quick patch. I'm working on a new page so I can stop this mess. (habitat.netlab.org)

I posted two new items to the top of my web page - a photo of the Kaysam remains as requested - the graphic Ralph made of the 2 SR (Simplex Repeater) QSOs (2nd & 3rd place distance records).

I am working on redoing my web page, sorry for the mess. If you let the page load to the new email list note you should have the two links just above it. You could then click STOP and not load the rest of the page. I cropped the photo a little but haven't made the picture web (slow connect) friendly. I'll try to make progress on this today.

73 for now.

From: Jamie R. Dean - W4JRD
Topic: 72 Message: 72

I'm hoping that one of can help with this problem. My wife and I have a 1987 Chevy Astro Van. When I first installed the Icom IC-2100h in the van it was great, good reports on the air and all. But all of a sudden I can hear the whine of the alternator on the radio's transmit and even sometimes on the receive. I have the radio wired straight to the battery on the + and - sides, but when the noise started the neg side was attached to a chaise ground.

So far to try to fix the problem I have replace the lead battery ends with brass ones. I replaced the neg. battery cable and changed the ground point of it. What else can I do??

thanks in advance,

Hi Jamie,

I've worked on many cars (ex-auto mechanic), including rebuilding the alternators. For the past 25 years, I've been a machinist. And I've had my Ham radio license for more than 30 years....

To me, it sounds like you need the alternator overhauled. You don't mention the mileage, but the brushes are only good for so much. When they start to break down, they arc more than usual, and the internal capacitor can't handle it.

Today's cars have greater demand on the electrical system, and as a result, the auto makers are installing larger capacity alternators in the new vehicles.

Mark,
Thanks for the ideas. I did come up with the problem today. Seems some of the plastic coat on the coax had rubbed off and the shield was rubbing the body of the van. After repairing the coax the problem stopped.

thanks for all the ideas,

77. Amateur Radio Spectrum Protection Act Reintroduced in US House

Yahoo group: VHF_UHF_SHF
Date: 2003-02-14 23:53:19 UTC
From: Bill Baker <kd5icr@arrl.net>
Topic: 77 Message: 77

Amateur Radio Spectrum Protection Act Reintroduced in US House
NEWINGTON, CT, Feb 14, 2003--The Amateur Radio Spectrum Protection Act has again been introduced in the US House of Representatives. The measure is an ARRL legislative initiative. Florida Rep Michael Bilirakis put the latest version of the bill, HR 713, into the legislative hopper on February 12. It has been referred to the House Committee on Energy and Commerce. When last introduced in 2001, the measure was known as HR 817.

HR 713 is aimed at ensuring the availability of spectrum to Amateur Radio operators. It would protect existing Amateur Radio spectrum against reallocations to or sharing with other services unless the FCC provides "equivalent replacement spectrum" elsewhere. Bilirakis, a Florida Republican, has twice before sponsored similar legislation at the League's recommendation. A Senate version of the bill is pending.

The measure would amend the Communications Act to require the FCC to provide "equivalent replacement spectrum" to Amateur Radio and the Amateur-Satellite Service in the event of a reallocation of primary amateur allocations, any reduction in secondary amateur allocations, or "additional allocations within such bands that would substantially reduce the utility thereof" to amateurs.

The ARRL is urging members of the Amateur Radio community to contact their representatives in Congress and request that they cosponsor HR 713. Experience has shown that, while most members of Congress understand and appreciate the benefits of Amateur Radio, some may be reluctant to sign onto a technical piece of legislation without some indication of support from their own constituents. A sample letter is available on the ARRL Web site.

The 2001 version of the measure attracted 53 cosponsors in the House but last spring became one of many pieces of legislation caught up in the so-called "Enron logjam," during which the Internet and Telecommunications Subcommittee did not meet, although its full committee, Energy and Commerce, held numerous hearings concerning Enron.

==>"BROADBAND OVER POWER LINE" POSES HF INTERFERENCE THREAT

The FCC soon will invite public comment on the concept of using existing electrical power lines to deliver Internet and broadband service to homes and offices. The Commission initiated a Notice of Inquiry (NOI) in ET Docket 03-104 when it met April 23. What the FCC calls "Broadband over Power Line" (BPL) is a form of carrier-current technology typically known as power line communication (PLC). Whatever its name, the technology is raising serious interference concerns within the Amateur Radio community, since BPL would apply high-frequency RF to parts of the power grid. One aspect of the NOI is to gather information on potential interference effects on authorized spectrum users.

"Entire communities will be affected, so every amateur in that community could have part of the radiating system 'next door' on the power wiring on his or her street," cautioned ARRL Lab Supervisor Ed Hare, W1RFI. Hare chairs the PLC Work Group of the IEEE C63 Accredited Standards Committee on Electromagnetic Compatibility <http://c63.ieee.org/>.

The complete NOI has not yet been released, and until that happens, the FCC will not formally accept comments in the proceeding. The ARRL will be among those expected to submit detailed comments in ET 03-104.

So-called "access BPL" would use medium-voltage (1 kV to 40 kV) power lines to deliver Internet and broadband applications. Hare says access BPL is likely to be a more significant interference source than in-building PLC technology "because overhead electrical wiring is a much better antenna than the electrical wiring within a building."

ARRL CEO David Sumner, K1ZZ, editorialized on the subject of PLC in "It

Seems to Us . . ." in the October issue of 2002 QST. "Is it possible to do
power line communications without causing interference to over-the-air
communications?" Sumner asked. "Count us among the skeptics. What may be a
fine transmission line at 60 Hz looks more like an antenna at HF." Hare
said his own computer analyses of interference potential from access
BPL/PLC suggest "a significant increase in noise levels" from deployed
systems.

The FCC appears enthusiastic about BPL, however, saying it has the
potential to "provide consumers with the freedom to access broadband
services from any room in the house without adding or paying for
additional connections." The Commission also touted BPL as "a competitive
alternative to digital subscriber line and cable modem services."

New digital power line designs use multiple carriers spread over a wide
frequency range--from 2 MHz up to 80 MHz--and capable of high data
rates--up to 20 MB/s, the FCC said.

In addition to viewpoints on interference potential, the FCC also has
requested comments on the current state of high-speed BPL technology, test
results from BPL experimental sites, appropriate measurement procedure for
testing emission characteristics for all types of carrier-current systems,
changes that may be needed in Part 15 technical rules, and the equipment
approval process to foster the development of BPL.

Tests of BPL are under way in several states, including Alabama, Maryland,
Missouri, New York, Ohio, Pennsylvania and Virginia. Hare says ARRL Lab
personnel will visit some of the test cities this spring to take field
measurements to quantify the potential for interference to Amateur Radio
operations.

BPL/PLC technology already has been deployed in some European countries,
and amateurs there have complained about interference. Japan--responding
in part to concerns expressed by its amateur community--decided last

year
not to adopt the technology because of its interference potential.

79. News from the ARRL and the FCC UPDATE

Yahoo group: VHF_UHF_SHF
Date: 2003-05-01 03:45:53 UTC
From: Bill Baker
Topic: 79 Message: 79

Please take the time to read this over and maybe tell the FCC what you think. Thanks
Bill KD5ICR

FCC Now Accepting Comments in ''Broadband Over Power Line''Inquiry

The FCC released its Notice of Inquiry (NOI) on the deployment of ''Broadband over Power Line'' (BPL) technology on April 28 and now is accepting comments. A form of carrier-current communication better known as power line carrier (PLC), the technology has raised concerns of substantial interference to the Amateur Radio HF bands.

BPL would couple high-frequency RF to parts of the power grid and use existing power lines as the transmission medium to deliver broadband and Internet access. In the NOI, the FCC acknowledges the interference risk from BPL.

ARRL Lab Manager and RFI guru Ed Hare, W1RFI, has cautioned that deployment of BPL could affect every amateur in communities where it's employed with a significant increase in noise levels. More information is on the Web at www.arrl.org/tis/info/HTML/plc/.

The complete NOI is available on the FCC Web site. The FCC now is accepting electronically filed comments via its Electronic Comment Filing System ECFS Express page. To initiate a comment, click next to ''Broadband over the traditional telephone network.''

THE AMATEURS CODE

by Paul M. Segal, W9EEA (1928)

The Radio Amateur is:

CONSIDERATE
Never knowingly operating in such a way as to lessen the pleasure of others.

LOYAL
Offering loyalty, encouragement and support to other amateurs, local clubs and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally.

PROGRESSIVE
With knowledge abreast of science, a well built and efficient station, and operation beyond reproach.

FRIENDLY
With slow and patient operation when requested, friendly advice and counsel to the beginner, kindly assistance, co-operation and consideration for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED
Radio is an advocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC
With station and skill always ready for service to country and community.

81. Morse Code Requirment is being Eliminated

Yahoo group: VHF_UHF_SHF

Topic: 81 Message: 81

Bulletin 2003-18 - Morse Code Requirement is being Eliminated

---

Whatever else happens at World Radio communication Conference 2003 (WRC-03), there's no mystery about the delegates' direction regarding the Morse code requirement. Morse code proficiency will disappear as a treaty obligation for high-frequency access when the International Telecommunication Union (ITU)-sponsored gathering under way in Geneva concludes July 4.

"One matter on which there appears to be no disagreement is the Morse requirement," said International Amateur Radio Union (IARU) Secretary (and ARRL CEO) David Sumner, K1ZZ, in a report <http://www.iaru.org/rel030623.html> on the second week of activity at WRC-03. "It is clear that the outcome will be to leave it to administrations' discretion whether or not to have a Morse receiving and
sending requirement." He said no administration participating in the sub-working group spoke in favor of retaining the Morse code treaty requirement.

The modification of Article 25.5 of the international Radio Regulations cleared Working Group 4C on June 24. Working Group 4C is dealing with this and other proposals relating to Article 25. The modified text says,
"Administrations shall determine whether or not a person seeking a license to operate an amateur station shall prove the ability to send and receive texts in Morse code signals."

It's possible but unlikely that the text would be tinkered with further at the committee level or even in the Plenary, which considers items for adoption. Sumner said delegates continue to wrangle over other aspects of
Article 25, which defines Amateur Radio operation.

Adoption of the Article 25.5 modification would not mean the immediate disappearance of the Morse requirement to operate on the amateur bands below 30 MHz. Each administration, including the FCC, would then decide whether or not to drop the requirement from its domestic regulations. Some countries have indicated a desire to retain a Morse code requirement.

Sub-working groups this week funneled their reports to larger working groups assigned to tackle various pieces of the huge WRC-03 agenda. More than 2600 delegates and other participants are attending the

four-week conference. For WRC-03, the IARU has fielded its largest team of observers
at an ITU conference in more than a decade.

There's less consensus on efforts to secure a "harmonized" 300-kHz-wide amateur allocation at 7 MHz. Sumner said initial discussions in Sub-Working Group 4C1 "were spirited and reflected sharp differences of
opinion" between those advocating realignment and those favoring no change out of deference to the disruption that any realignment would cause broadcasting services now occupying 7.1 to 7.3 MHz in Regions 1 and 3, and the fixed services above 7.3 MHz that would be affected by any upward shift in broadcasting. Amateurs in the US and the rest of Region 2 enjoy a 300-kHz allocation from 7.0 to 7.3 MHz, but hams in the rest of the world, Regions 1 and 3, have only 7.0 to 7.1 MHz.

Three alternative proposals have been passed on to Working Group 4C. "The largest group favored realignment in two stages," Sumner explained. That group included the US, CEPT, CITEL and the African Telecommunications Union. The two steps would expand the band in Regions 1 and 3 by 100 kHz
in 2007 and add the remaining 100 kHz in 2015. Other plans put forth contained longer time lines. By week's end, Sumner said, the issue could be passed on to Committee 4 and then to the Plenary, where items need two
readings for ultimate WRC-03 approval.

The issue of an allocation for satellite-borne synthetic aperture radars (SARs) in the 70-cm band (432-438 MHz) also appears well on the way to resolution. "While it appears very likely that there will be an allocation, it will be secondary," Sumner explained.

Full reports on WRC-03 activities are available on the IARU Web site http://www.iaru.org/news-releases.html

82. FS: VHF Dummy Load / Wattmeter MX-1785/U

FOR SALE:

MX-1785/U Dummy Load / Wattmeter
Air-cooled 52 ohm load will work at all frequencies.
This is a large, heavy-duty, VHF 1000 watt rated dummy load.
Has built-in VHF-UHF wattmeter that covers 20 to 1400 MHz.

R.F. connector has protective cover. Also has hardline connector
plus silver-teflon adapter with protective keeper/socket.
Use with Type 'N' adapter that is supplied with the unit.

The 52 ohm dummy load will also work below 20 MHz.
Meter movement has markings as both 'Hickock 468' and
Bird Electronic Corp.

Excellent, clean condition.
Will sell for $295.00 plus shipping

FOR SALE:

MX-1785/U Dummy Load / Wattmeter.
Air-cooled UHF 52 ohm load.
This is a large, heavy-duty, UHF 1000 watt rated dummy load.
Has built-in VHF-UHF wattmeter that covers 20 MHz to 1.4 GHz.
R.F. connector has protective cover. Also has hardline connector
plus silver-teflon adapter with protective keeper/socket.
Use with Type 'N' to hardline adapter (silver/teflon) that is supplied
with the unit.
Meter movement has markings as both 'Hickock 468' and
Bird Electronic Corp.
Excellent, clean condition.

Will sell for $295.00 plus shipping

91. 10M SSB receiver?

Yahoo group: VHF_UHF_SHF
Date: 2004-06-16 00:19:47 UTC
From: Don Pfister
Topic: 91 Message: 91

Anyone know of a 10M SSB receiver? Not too costly, small size and light weight would be good.
;-)

We would like to try and simulate the new AMSAT sat. PSK up on 10M SSB, down on 440

FM.

We don't need much. ;-)

Thanks and 73

If you check out eBay, you can probably get a Radio Shack HTX-100 for anywhere between $50 and $100. I have two of them. One has ben converted to have a 2 meter transverter inside the radio, used as a UHF/microwave IF rig.

Thank you but I'm looking for a RECEIVER, not a transceiver.

I was hoping someone knew of a kit or simple 10M SSB receiver, even a handheld scanner that will handle 10M SSB. I know there is at least one HT out there that will receive 10M SSB, but it costs more than I hope.

Thanks for you attempt,
73

Don,

I saw your original message and didn't reply because I thought someone else would give the same answer as I was going to suggest. But, it appears you didn't get a good response.

I think you wanted a limited frequency 10 M SSB to do a satellite QSO, which means you didn't need the whole 10 M band and you didn't care if it had cw and other niceties.

I am thinking about going to a transverter for my 2m tx/rx. So I have a similar problem, except I want to do eme, so I need a better level of performance than you do.

I've been looking at converted CB's. They are plentiful on ebay, except that most of the guys who are selling them don't know what frequency(s) they are operating on, they just know they have 'extra channels'. The vast majority of these CB's are not constant coverage because they use the stock channel selector switch, which has gaps in it to allow for the RC frequencies which are in between the existing channels. Anyway, the entire 'freeband' world uses these converted CB's and the web is full of conversion information.

You might do well to look for a converted CB that covers the specific frequency you need, my interpretation of your original message was that you don't need to cover the whole 10 M band anyway.

Regards,

Art

From: Zack Widup
Topic: 91 Message: 95

Depending on how much trouble you want to go to, here's another possibility.

Kanga US sellss kits for the KK7B direct-conversion R2 receivers. Get a kit that includes the R2 board and the LM-2 VFO for 10 meters.

Then you'll have a nice little fairly inexpensive receiver only for 10 meter SSB.

I built an R2-T2-LM2 combination entirely from scratch, even making my own circuit boards, for 144 MHz to use as an IF for mucrowave transverters. It works quite well. But you might want to go the kit route if you don't have time to make the boards, scrounge up the parts, etc.

98. Field Day

Yahoo group: VHF_UHF_SHF
Date: 2004-06-24 01:08:56 UTC
From: bankstonb@yahoo.com
Topic: 98 Message: 98

I was thinking about putting my 2 meter beam back up for the
Field Day this weekend.

Two questions i have ...

1. Is it worth it? How much activity is there on 2 meters during
Field Day? I was wondering how many stations will actally have an
active 2 meter station set up.

2. If it is worth it to put the beam up, what poliarization is best?
Is the activity going to be on FM simplex or sideband? (or both?)

Thanks in advance,

73

Our ham radio group (Cherokee County ARC-K5JVL) has done 2 meter SSB in the past (we will do it again this weekend-I think). Horizontal polarization is used primarily for SSB and the beam is a must. Good luck!

Just an attempt to let you know about the balloon flight in the morning.
9/26/04 10:30 a.m. CDT from Edgerton, KS

We hope to get to about 90,000 feet so there should be a range of about 500
miles in all directions.

The 2M RDF locator beacon will have a horizontal antenna.

Let me know if you hear anything. You should be able to see where it is at on
the web at findu.com see links below.

Pictures from the balloons should be received every 3 minutes. You can check our
web site for SSTV picture slideshows from previous flight at habitatskylab.org.

From: Zack Widup
Topic: 106 Message: 106

I haven't seen a whole lot of spam on this group. Others are worse.

I am the owner of one group which puts the first message of someone who joins it on moderated status. Once the person posts an on-topic message the moderation is removed. We haven't had any trouble - it seems the spammers just ignore the group.

hi, my name is tanya and i am 25 years old almost new to group (i post here two day ago). I just thought to say hi again, still i search for good man to become love partner. i am from russia, now living in usa and liking it very much!

if you want to visit my page on the world wide web you can click the link below! i have profile there with webcam camera window and yahoo aim and it is open to you to see free off course!

http://www.tantrasweet.com/tanya/

interests; i like dating, try to find good man for love, books about russia and usa, drinking, computer games, talking with people on chat and webcam

see you! VHF_UHF_SHF group is favorite!

Love,
Tanya

I feel the same way as you. However, this mailing list appears to be unattended-probably running without an administrator.

Years ago, I was asked to resign as an administrator of a mailing list when I suggested to the owner of the domain (a WELL KNOWN amateur radio only domain) that we needed to be concerned with automated spambots subscribing to mailing lists for the sole purpose of spamming. In those days, it was cutting edge, today it is common practice.

At the time, I owned an internet based antispam service, we would track down spammers at the request of ISP's, eventually being able to identify the person so that legal action could be taken. Recently, several type 1 spammers have been brought to court and damages have been recovered. Just last week, a spammer was sent to jail, the first time this happened in the history of the internet. Anyway, I was pretty savvy in the ways of these slime smammers.

Today, spambots subscribe to mailing lists using automated software to meet the demands of various mailing list robots. They send their spam and unsubscribe, sometimes in a matter of seconds, never to be heard from again. When the list is spammed, some listowners lock out the offending email address-which does no good.

The answer is for a human to administer the list and for all posts to be reviewed before they are sent to the list. Unless someone steps forward and is willing to provide this function, there is virtually no chance that the list will be spam free.

I have been subscribed for quite awhile, and I don't think I've ever seen a non-spam message on the list.

Thanks for your input ART. You made a fine point on this subject. I know tthat alot of it is coming from peplo with no life and all them what is some one like us as thoug their'r going to ruffle my featers think not. don't what to give them to much antt. You know of anyone who makes a Motorola NMO to N female appd? I what to use mine 920 mhz Motorola Spectrum antenna as a base. It looks like a mobile cell phone antenna with the open air coil in the mil. Maybe I just make a 920 J-POLE. Never heard of one, but can it be done. I have 100ft. of LMR-400, no hard-line though, maybe to pricey for a cheapie antenna. Any way going to take the LRM-400 and cut it in half for a 50 feet run and use the other half for 220 mhz J-POLE. Put N conn. on that too. Maybe overkill for the 220 but mine ADI-247 only puts out max of 30 Watts. Thats per owners manu. What the hay if i'm going to use LMR-400 i might as will use a low-los conn. What do you think Art? am I going in the right direction with this? Thanks Joseph

Investors News Alert!!

THIS IS UNDISCOVERED GOLD (MDEX.PK)

Watch out the st0ck go crazy on Monday morning

February's Feature Company...
Madison Explorations, Inc.
Symbol: MDEX.PK
CURRENT SHARE?PRICE?$0.36
?

Madison Explorations, Inc. (MDEX.PK; $0.36) S.T. Target $2.75

Madison is incorporated in Nevada. Shares trade in New York under the ticker symbol MDEX. Current price per share is just 36 cents, nearly 300% above its September low. Opportunities as clear and sparkling as this one come along rarely. Carpe diem!

There are those rare times when the decision to invest in a particular stock or industry is a no-brainer: homeland security in the wake of 9-11, gold in the fall of 2001, and China in early 2002, for example, to name a few prescient calls. The Canadian diamond industry and diamond explorer Madison Explorations present us with just such a unique opportunity.

Canadian Diamonds: An Industry in the Rough
Canada is entering only its sixth year as a diamond player, but already it's the world's #3 diamond producer, behind Botswana and Russia. From 2002 to 2003, Canadian diamond production more than doubled to 11.2 million carats. In a very short time, Canada has gone from a non-entity in the diamond biz to a supplier of about 15% of the world's rough diamonds. Today, nearly half of all funding for diamond exploration goes to Canada.

Even more impressive than the huge growth itself is the fact that that huge growth has come on the strength of just two active diamond mines: Ekati, jointly operated by Dia-Met and BHP, and Diavik, jointly operated by Aber and Rio Tinto. Tahera's Jericho Mine will go online next year. Snap Lake, a joint venture between De Beers and Winspear - is slated for full production in 2007. It will propel Canada passed Russia into the #2 spot amongst the world's diamond producers - with just four active mines! In terms of end-market, Canadian diamonds have a crucial advantage over the competition: Unlike diamonds from Angola, Liberia, and Sierra Leone, for instance - "blood diamonds" used to finance bloody political conflict, Canadian diamonds are "clean." Consumers' preference for clean diamonds is one of the reasons Tiffany struck a deal with Tahera to buy or market all the diamonds Tahera's Jericho Mine produces. Tiffany refuses to sell "blood diamonds."

Madison Explorations: An Investor's Best Friend
The Northwest Territories has been the preferred target area for diamond explorers. Shore Gold's discovery of a 19.7 carat rock at its Star Diamond Project last year intensified exploration in Saskatchewan, the second most active exploration area in the Northwest Territories as measured by money inflows. Madison Explorations is the most active explorer

in Southern Saskatchewan. That includes the De Beers-Kensington partnership. Madison's primary area of exploration is Scout Lake, which, according to the Saskatchewan Geological Survey, is one of the two most promising diamond areas in the province. That conclusion confirms the work of Dr. Joseph Montgomery, the director of five mining companies and Madision's lead diamond explorer. Dr. Montgomery has spent more than a decade surveying the area. He is a person of considerable expertise and is exceptionally well regarded in the metals and minerals discovery business. Dr. Montgomery has been involved in more than 300 prosperous mineral explorations all over the world, including projects for Diamond Fields. Based on his ten years surveying Scout Lake, Dr. Montgomery believes it is one of the most promising diamond locations he's ever seen and that the area could be home to the largest diamond deposit in the province

Madison is the only active explorer in Scout Lake, which, from a geological standpoint, has many of the same characteristics as Fort ? la Corne, where Shore Gold made last year's spectacular discovery. Madison is currently exploring two other potential diamond properties in Southern Saskatchewan, Bulls-eye and Bronco. The results of early indicator studies at both properties have been very favorable.

Winspear, Dia-Met, and Aber each partnered with a more senior diamond producer. Madison is currently the only active explorer in one of the most potentially diamond-rich regions within a national industry that is experiencing dazzling growth and whose full potential is only just now being tapped. We would not be surprised to see Madison follow the trend and partner up with a De Beers, for instance. In the meantime, look for additional diamond property acquisitions and discoveries by this aggressive upstart - and for substantial share price appreciation over the mid- to long-term.

158. Met my perfect sumone finally...!

Wow, what a blast, what a trip actually. was kind of getting bored with the net, was gonna get rid of my broadband and go back to 56k because i hardly used the thing, and really, I didn't do anything much to need it. But last weekend i found this crazy pickup thing, with webcmeras and all the gear. used to waste my time trying to find gals on yahoo, but this place is like 100X easier. this is the spot that made me decide to stick with my net for a bit longer http://www.canuhandleit.info/cgpv . have fun, i did ;)

This campaign is about Human beings, Democracy, UNHCR, Refugees, The Iraqis, Islam, Kurds, Human rights, Respect, Money, Donations, Angelina Jolie, Pavarotti, Giorgio Armani, Donors, Peace, History, Campaigns and about you if you care about these words.

Hi there,

I am SAM, an Iraqi refugee living in Lebanon at the moment; I have spent the last 10 years of my life as a refugee registered with the UNHCR in Beirut. The last 4 years, I have spent as an activist for peace and human rights (especially refugees and asylum seekers) on the Internet; I'm also books author and ebooks publisher. I have launched many campaigns to improve our situation as refugees in Lebanon and hopefully bring more understanding to our problems worldwide. I helped make many changes and improvements at the UNHCR office in Beirut; I used the Internet as the field for my activities (you can read more about that in my free ebook 'MY CAMPAIGNS'). All my ebooks are free and could be download from my sites.

This is my newest campaign, it's about the illegal and humiliating actions of the UNHCR, who using photos of refugees as banners and human-buttons to collect money. This is an abuse of the dignity and humanity of the refugees and must stop immediately and a clear public apology present by The United Nations High Commissioner for Refugees. My friends, I am talking about the pictures you can see here: http://un4.beplaced.com

Also you can read my new campaign 'Urgent, we need smile' here:
http://www.powow.com/lebanon2/email_me.htm

For more info about UNHCR and life of refugees you can read my free ebooks. I invite you as fellow humans and members of the world community to support my campaign by reading my article on my site and see the human-buttons. The campaign is to support and improve the UNHCR http://www.unhcr.org especially after the last scandals in the UN and UNHCR, just for example: http://www.mizzima.com/archives/news-in-2005/news-in-april/12-April05-22.htm

"We make demonstration and fast because the UNHCR office in Cairo did nothing for our problem..." http://news.bbc.co.uk/2/hi/africa/4440730.stm

Together we will build better world.

You could reach me fast via this form: http://lebanon.9cy.com/email_me.htm
and if you like to know more about me, you can google for my name 'osam altaee'.

Thanks
THE TRUTH WARRIOR

EUROPEAN AMPLITUDE MODULATION AMATEUR RADIO GROUP

NEW YAHOO GROUP: http://groups.yahoo.com/group/eamarg/

This is a group for licenced amateur radio operators (HAMs) who are interested in the AMPLITUDE MODULATION (AM) mode of communications. The group exists to promote the AM operation in the HAM bands and provide information about operating events and technical matters.

EAMARG encourages regional AM activity insuring there is AM available somewhere on the amateur bands. Based on the fact that the majority of the AM calling frequencies in USA belong outside the european HF bandplans... one of the EAMARG main goals is to help in the establishment of AM calling frequencies that will be compatible with the HF bandplans of the european countries.

EAMARG future plans including the sponsorship of operating events and contests that will promote the use of Amplitude Modulation.

In order to join this group you must be a licenced radio amateur.

This is just awesome guys! I finally got around to graduatin and I didn't even have to turn up a single day this time around to get my final credit points. Now I am fully qualified in a BA and on the hunt for a new job! I'll let you guys know how I do, but just thought I'd mention this now since they helped me out. If any of u interested in getting a BA or something similar without having to go through all the hassle they put you through in US institutions give these guys a call 770-621-2634 . They got me through in around a month.

You may have wondered if there are people out there who consistently make money from the stock market. And yes, there are people out there who are consistently making money from the stock market because if they were not making money from market they would not be there and the markets would not be there too. These people are no smarter than you. They do not work any harder and neither are they lucky than you.

But, unlike you, they never seem to worry about having money because they know one or two secrets of making money in the stock market. You see most people miss the big idea here. They think it takes a lot of money to make a lot of money. But that is not how it is done. The idea is to make pennies consistently and to use them to build vast personal fortunes. The stock market is a proven wealth builder and can and should benefit all participants. It is only fair that each one of us should be entitled to a piece of the action.

355. Magic Bullet To Retirement

Yahoo group: VHF_UHF_SHF
Date: 2007-10-19 06:29:55 UTC
From: cane exuye
Topic: 355 Message: 355

Everyone is looking for that magic bullet that will allow them to retire rich or at least comfortable. They want to be able to do what the TV ads show - vacationing in Fiji, fly fishing in Vermont, etc, etc. It seems so easy on TV.

A pretty financial analyst from some big company shows the prospect how it is done. The next part of the trick is getting it done and that aint easy. It usually means a change because the potential retiree must take part of the cash now being spent on present life style and put it away not to be spent until retirement becomes a reality. If the couple shown in the ad do it they will be glad they did. Sacrificing some current pleasantries will have been worth it. The $2,000, $3,000, $5,000 trip today could be worth twice that amount or more at age 65 if the worker now is lucky enough to have a good broker or planner one who will not allow loss of principal during subsequent bear markets.

357. Investing Secrets of the Wealthy

Yahoo group: VHF_UHF_SHF
Date: 2007-10-20 09:43:08 UTC
From: cane exuye
Topic: 357 Message: 357

My favourite subject. Investment. Investing in your own ecommerce business is the best, most time efficient way to make money. But to grow real wealth you need to diversify into other investments as well. Your ecommerce business (or other business / high paying job) provides the cash for investing. It is the interest earned of those investments however that pays for your luxury lifestyle.

358. Why the Rich Keep Getting Richer

Yahoo group: VHF_UHF_SHF
Date: 2007-10-21 06:47:18 UTC
From: cane exuye
Topic: 358 Message: 358

Rich people: fortunate, lucky, selfish, and arrogant?
Or highly educated, caring, brilliant individuals?
Becoming rich isnt hard, but it does require a bit of
time and knowledge. Having time to get rich, educating
oneself, and buying assets are the three key factors
in attaining untold wealth.

Rich people usually either have or make time to get
rich. Most people that now own huge mansions, have
wonderful riches, and drive the nicest cars usually
begin taking the road to riches in their spare time.
One plan, the most common, is to work at a low-risk,
steady job until one has enough money to invest in
something that will feed one for the rest of their
life. But before one can invest in anything, one first
has to educate oneself.

359. Home Based Businesses - Getting Out Of The Rat-Race Forever

Yahoo group: VHF_UHF_SHF
Date: 2007-10-22 03:35:07 UTC
From: cane exuye
Topic: 359 Message: 359

In early 2006 my wife Kath was looking for free finance ebooks on the web. We were both disgruntled about the pay and long dangerous hours in my contracting job, so she decided to do something about it. She came across an ebook from Jamie McIntyre at 21st Century Academy called "What I Didn't Learn at School But Wish I Had". After reading the ebook Kath was so impressed that she ordered the free DVD with the same title.

When we both watched the DVD we were convinced that this was the right system for us, so we ordered the 21st Century Homestudy Program. This was tough going, because we were down to our last $500 after a renovation on the trashed former drug baron's house across the road. We thought that the renovation road was the route to wealth and thats why we were doing it. Previously, we had been in Network Marketing for many years, but could not seem to breakthrough to the levels we needed to have a decent lifestyle. When we ordered the program, our one thought was, if this doesnt work, its getting returned!

360. To Enjoy Your Retirement Years And Have Enough Money You Need To Plan Now

Yahoo group: VHF_UHF_SHF
Date: 2007-10-23 10:53:17 UTC
From: cane exuye
Topic: 360 Message: 360

It is never too late or too early to start investing for the future. Of course there will be a lot of advantages if you start investing for the future at an early stage. Note that if you start investing while you are still very young, time could work to your advantage. The value of money and properties could go higher with time, thus in most instances, the longer you keep the investment, the greater will be your gain.

Contrary to some myth that you will need a fairly large sum of money to start investing, you could actually start small. If you were financially hard up that every dollar would count to tide you over to the next payday, with more reason for you to save and invest your money into some profitable ventures. Why would you save when you can hardly afford to buy the basic necessities in life?

361. How To Become A Millionaire In 8 Years Or Less

Yahoo group: VHF_UHF_SHF
Date: 2007-10-24 20:42:32 UTC
From: cane exuye
Topic: 361 Message: 361

Contrary to most people's experiences, the FOREX market is not a voracious "black hole" that seeks to swallow up your hard earned money. The FOREX market is simply a market like any other market, whether you are selling bushels of wheat, fresh fish, or currencies. It has no agenda to deprive you of your cash. It's just a harmless ol' teddy bear that needs to be cuddled and loved. And, if you learn to love it, it will love you back, and in very generous and tangible ways. On the other hand, if you are determined to think of it as your enemy, then you have no choice but to defeat it; and, of course, it will fight back. As any professor of quantum physics or spiritual leader will tell you, how you perceive a thing will determine how that thing will respond, it's a principle of cosmic proportion.

475. FS: 50 MHz Amplifier

Yahoo group: VHF_UHF_SHF
Date: 2011-02-26 23:00:24 UTC
From: Bry Carling
Topic: 475 Message: 475

FOR SALE: 50 MHz Linear Amplifier, AM-1180/GRC

250 watt linear amplifier - conservatively rated.
Designed to cover 50-100 MHz, and has 250 Watts max input. Used with
T-302/PRC transmitter. Complete with 4X150A tube and everything needed
except the bottom cover is missing. Excellent condition, Easily modified to
run more power with a 4CX250 as W4DEX has done. Simple, basic, military
workhorse amplifier. Easy to get at everything internally and not a huge unit.
Needs external power supply approx: 1250V DC at 200 mA, and 6V AC at
2.5 A
Uses N connectors for RF in and out. Dimensions: 12" X 6.25" X 13.5" deep.

Pictures and details at:
http://www.af4k.com/radios.htm

476. FS: Hallicrafters HA2 TRANVSVERTER

Yahoo group: VHF_UHF_SHF
Date: 2011-02-26 23:53:44 UTC
From: Bry Carling
Topic: 476 Message: 476

FOR SALE: Hallicrafters HA-2 Transverter for 2m.

For 144 - 148 MHz band allmode use. Converts 10 meter transceiver to 6 or 2 meters.
Maximum drive power level is 25W. The output on 2m is rated for about 60 watts
and operates "all modes."
Front panel controls: Power on/off, range selector, tuning, loading, output indicator, plate current meter. 8 tubes, 5894 in the final. External power supply
requires 750 volts at 120mA, 250 volts at 70mA, minus 60 volts at 10mA.
8"H x 17"W x 8 7/8"D. Production Year 1962.

Available for $85.00 plus shipping.

Pictures and details here:

http://www.af4k.com/radios.htm
